

Establishing transparency, progress, and trust in the public sector

In public-sector, governmental, and non-profit environments, LG Thin Clients help protect valuable data while delivering better security and cost-efficiency.

Every LG Thin Client provides a secure, cost-efficient, and reliable computing experience that's easy to implement and manage. When they're deployed in public sector contexts such as government offices and non-profit organizations, LG Thin Clients can provide additional benefits.

FISCAL RESPONSIBILITY

Whether supported by public or charitable funds, your institution has an obligation to use the budget in sensible and strategic ways. Evolving a traditional, PC-based environment to an LG Thin Client model can help make the most of every hardware dollar spent without sacrificing performance or effectiveness.

16% cost savings on estimated annual CapEx

The average product lifecycle for traditional PCs is four years, compared to seven years for a Thin Client. Overall, a well-maintained cloud-based device has better cost-efficiency.

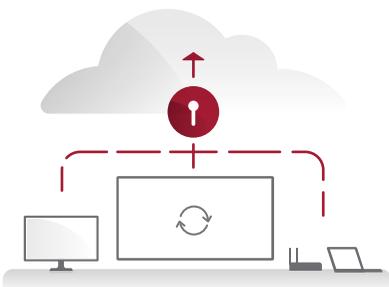

Simulation data based on a virtual work site with 1,000 employees.

MAXIMIZE PRODUCTIVITY

Save time with a Thin Client fleet that requires less upkeep than most traditional PCs. An entire fleet can be updated from one centralized terminal, eliminating the need to constantly update individual devices.

GO VIRTUAL

In an LG Thin Client environment, IT administrators can create virtual machines (VMs)—in the data center, in the cloud, or in a hybrid configuration—customized to specific tasks. End users can then log into these VMs from an LG Thin Client with the confidence that their data remains safe.

SECURE SENSITIVE DATA

Since LG Thin Clients run virtual desktops and applications at the data center, it's difficult for malware and viruses to establish a foothold at the endpoint. In addition, versatile connectivity allows the integration of supplemental measures such as biometric security readers, helping prevent unauthorized access and keeping government and non-profit institutions out of the headlines.
